

Moduline Industries (Canada) Ltd. Builds 20,000th Home

Moduline Industries opened its factory in Penticton British Columbia in 1970, where home number 20,000 is now being manufactured. The 2,700-sq. ft., three-section home will be displayed at the factory through Spring 2002.

One of Canada's largest homebuilders, Moduline has been a significant, stable, private sector employer in the South Okanagan Valley. The manufacturing facility directly employs 150 persons on average, and indirectly contributes to the ongoing economic success of numerous supply businesses and the communities in the region.

Perhaps most importantly, Moduline Industries has not only provided well-built homes for British Columbians, but also backed up its construction with consistent, prompt service. Built in a Canadian Standards Association certified factory, each Moduline home now has a third party provided extended warranty.

In recent years, Moduline Industries has expanded its Canadian manufacturing capacity with the acquisition of a factory in Alberta. Today, Moduline also builds both HUD Code mobile homes and building code homes for the northwestern United States.

The Members of the Manufactured Housing Association of British Columbia are very proud to acknowledge the contribution made by Moduline Industries to providing quality-built, affordable housing.

Moduline Industries' 20,000th home floor plan on reverse
